

What do you see?

Neighborhood?
School?
Hospital?
Offices?
Hotel?
Industrial Campus?

We're SíEnergy.

We believe our
innovative energy
solutions will
power your next
great vision.

We've got you covered.

Since 1998, SiEnergy has been an innovator in the energy industry. We leave no stone unturned to provide innovative and smart solutions that make sense. We're helping transform the way enterprising companies address their energy needs—by looking ahead to emerging and sustainable solutions vital to your community, your environment and your economic growth.

CONSULTING, OPERATIONS & SUPPORT

GAS DISTRIBUTION

SiEnergy is a growing natural gas distribution company, providing premium services to thousands of residential and commercial customers. Our story begins with a small group of customers in and around Missouri City, Texas. Today, we're proud to be the Lone Star State's fifth-largest, independently owned distributor of efficient, clean-burning natural gas.

Natural gas is the most
**affordable, abundant,
reliable, and cleanest-
burning** fossil fuel today.

GAS SUPPLY

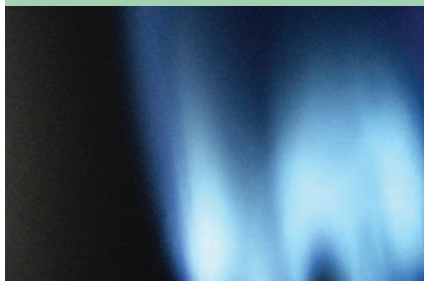

A recent addition to SiEnergy, Terra Gas Supply operates as a provider of wholesale natural gas to non-residential customers and gas distribution utilities. Terra makes natural gas available at competitive prices to wholesale-purchase customers as a reliable and convenient, single-source natural gas resource.

**98% is produced
domestically.**
It is uniquely American.

ALTERNATIVE POWER

We can help you implement cost-effective and energy-efficient strategies that incorporate responsible, high quality alternative energy solutions.

The **low cost
of natural
gas** makes it an
**economically
viable fuel
choice** for
alternative energy
solutions.

What we see.

We see natural gas as a long-term
economical and environmental solution
vital to our country's well-being.

We see your success — through the power of
creative thinking, not a list of services.

We see our approach redefining the energy
industry — powering your business and bringing
you stronger returns on your investments.

Our solutions benefit you in the long run.

When was the last time your energy company helped improve your ROI?

Businesses like yours need a flexible energy partner to help them go beyond traditional ways of addressing power management solutions. We look for creative opportunities that others don't—partnerships that are beneficial to all parties.

We help create value now and into the future.

At SiEnergy, we act as your total energy provider—committed to crafting solutions that generate revenue, connect energy-efficient ideas and innovative technologies that redefine the way an energy company does business.

Like you, we are entrepreneurial. We advance your unique interests, and we're willing to go where traditional gas utilities don't. In an industry that's not always known for its flexibility, we are committed to building creative and collaborative partnerships with our customers.

Imagine
an energy
company
changing
to fit your
needs.

Natural gas is the right choice.

**Less expensive. More appealing.
And easier than you think.**

The development of shale gas and the growth in liquefied natural gas (LNG) deliver on the promise of affordable and environmentally acceptable power options today. Plentiful natural gas also means we can readily meet future demand for more, cleaner energy.

Why Natural Gas?

It's clean, abundant, reliable, efficient,
versatile and American.

It heats our homes, cooks our meals,
provides 24% of the nation's electricity,
powers vehicles and fuels industrial facilities.

It has the lowest emissions of any fossil fuel.

BENEFITS OF NATURAL GAS

CONVENIENT

Lowers energy costs, resulting in consistent heating, cooking, manufacturing and comfort.

HEALTHY

Generates half as much CO₂ as coal-fueled energy.

LOW COST

About 1/3 the cost of electricity to deliver the same amount of energy.

ABUNDANT

85% of the natural gas used in the U.S. is produced domestically — reducing dependence on foreign energy.

EFFICIENT

Delivers 186% more usable energy than grid-based electricity. Consumers don't pay for generation and transmission loss.

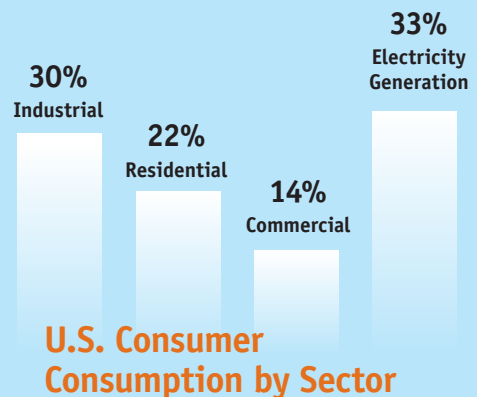

RELIABLE

Providers invest more than \$7 billion annually to ensure safe, reliable and consistent delivery — independent of the electric grid.
